

# Feeding Schedule

Lighting hours: 18HR 12HR

maintain day and night temperatures between 24-28 °C for ideal growing conditions. Raise humidity level around 65-75% for the first 3 weeks then lower to 55-60% for the remainder of the flowering cycle.

Always use a circulation pump in the main tank to keep nutrients well mixed. Adjust the final pH of the nutrient solution to 5.8 - 6.3; water temperature 18-21 oC.

Total EC is the maximum recommended strength; adjust to match your strain and growing system.

During periods of hot weather, lower the EC. Make up a fresh tank of nutrients every week.

Growing Weeks	1	2	1	2	3	4	5	6	7	8	Flush
Total EC	1.4	1.6	1.8	2.0	2.0	2.0	2.0	2.2	2.2	2.2	
Vita BASE											
Vita Root											
Vita Sweet											
Vita Cal											
Vita Bud											
Vita Finish											
Vita Bulk											
Vita Silica											
Vita Guard											

Dosage: All Additives 1ml: 1ltr  
 VITA-Base 1-4ml:1ltr, Lower VITA-Base to 1.6 EC when adding VITA-Bulk, Lower Vita-Base to 1.2 EC when adding Shooting-Power
